CYBERSECURITY EXPERTISE

EASY DYNAMICS℠

Automation

Close the gap between speed and security.

We deploy human-centered automation to accelerate mission-critical work without compromising security.

We build automated tools and processes specifically for federal agencies and other highly-regulated environments – where speed, security, and accountability are non-negotiable. Our approach is all about freeing teams from rinse-and-repeat tasks, allowing them to focus on what matters most: protecting critical systems and achieving better outcomes for their customers and their agency. **By leveraging automation that's human-centered, transparent, and intentional, Easy Dynamics closes the gap between *fast* and *secure,* giving organizations the confidence to modernize at the pace their missions demand.**

Automating across the full delivery lifecycle.

Our automation capabilities span the complete system lifecycle, from security and compliance to infrastructure and program management.

Continuous Compliance & Drift Detection

We continuously monitor environments for unauthorized changes, using a closed-loop system where compliance verification is ongoing. When drift is detected, automated workflows can revert systems to a known state, generate alerts, and capture compliance evidence for audits.

DevSecOps & Cloud Automation

Using infrastructure-as-code, CI/CD pipelines, and policy-as-code, we deliver cloud solutions that are secure by default and continuously checked against federal standards. We deploy automation to provision environments, validate configuration pre-deployment, and enforce guardrails to ensure non-compliant resources never reach production.

The Industry Leader in OSCAL-Based Compliance Automation

OSCAL Adoption Services

Get complete OSCAL adoption support, from assessment to optimization. Our framework covers target identification, artifact conversion, tool integration, and change management.

Compliance Documentation

Convert your existing SSPs, SAPs, SAR, and POA&Ms to machine-readable OSCAL formats. Our process helps your team build reusable component definitions for your technology stack.

Compliance Monitoring

Deploy an automated control assessment model that produces OSCAL assessment results. Our hybrid approach uses machine-driven continuous monitoring and human oversight where needed.

Identity & Access Management Automation

We automate identity lifecycles across complex multi-cloud environments, supporting Joiner, Mover, and Leaver workflows at scale. Using commercial tools and custom development, we help agencies automate privileged access management, enforce zero trust principles, and integrate identity governance into CI/CD and cloud operations.

Agile Delivery & Program Automation

Leveraging automation in our agile and program management practices allows us to support more consistent delivery workflows, unlock automated reporting capabilities, and enable faster feedback loops across engineering, security, and compliance teams. The end result is maximum predictability – without sacrificing flexibility.

Enhanced by AI. Directed by people.

We thoughtfully incorporate AI into our automation, leveraging its speed and utility to amplify human expertise – not replace it. Final decisions and accountability always remain with the people who use our AI-enhanced tools, which help us to:

- ✔ **Accelerate analysis and development**
- ✔ **Identify patterns and anomalies**
- ✔ **Support engineers and operators with better insights**
